

## “YOU, AT THE HEBREW UNIVERSITY, ARE THE BEST AMBASSADORS OF THE STATE OF ISRAEL.”

— *President Shimon Peres, visiting The Hebrew University of Jerusalem's Rehovot Campus*

Scientists at the Robert H. Smith Faculty of Agriculture, Food and Environment are pioneering life-saving innovations to combat global food shortages and climate changes that threaten such essentials as water, air and soil. After learning of the faculty's revolutionary advances in water use, crop adaptation and soil treatment, among others, the Israeli President said, “No diplomatic explanations can serve as an alternative to your enormous contribution to agricultural development and the eradication of world hunger.”
